A GAMING CRYPTO TOKEN

WWW.PUB30.COM

1.0 INTRODUCTION

PUB-30 is a gaming crypto-token built on the Binance Smart Chain(BSC) Network to revitalize the gaming industry with its NFTs and Metaverse Technology. PUB-30 can be bought, sold, and exchanged on multiple exchanges by players.

It is a blockchain-verifiable non-fungible token (NFT), a type of digital asset. Assets might be pieces of art, music, or in-game assets like unique avatars.

It's no surprise that PUB-30 is at the top of the crypto coin game.

1.1. Account Creation

Every user creates a public and private key pair (account) to manage their in-game assets and PUB-30 token cryptographically. The public key is their unique identifier on the Binance Smart Chain address. The private key is used to sign network-related transactions. Our API provides a workflow that creates an account automatically during the game's onboarding process. It ensures that registering for a game won't be any more difficult. Those who already have an account need to sign up with our wallet and submit their public address.

1.2. Wallet

After creating the wallet, the player can get in-game awards and items to fill it. The wallet allows the user to view their transactions and unique non-fungible items. You can also purchase items on the marketplace with the account. Everyone is welcome to join the ecosystem; all that is required is a valid, authenticated email address. Any activity that may cause PUB-30 to leave the ecosystem, like using the marketplace, necessitates compliance with rules, including age verification—to do this, a KYC is required.

2.0 DISCLAIMER

This document is provided solely for informational reasons and is subject to change without notice. In this whitepaper, PUB-30 disclaims any representations, warranties, or undertakings concerning the truth and completeness of any information.

There is no attempt to create or implement any contract in this whitepaper, and no attempt is made to be all-inclusive or exhaustive. The primary goal of this whitepaper is to provide relevant information to potential token holders so that they may thoroughly analyze the project and make an informed decision.

Before participating in the acquisition of PUB-30, we strongly advise you to carefully read this whitepaper and all related documents, including the purchase contract. You might also hire qualified professionals to assist you with investment analysis.

PUB-30 accepts no duty for any damages, direct or indirect, resulting from the use, reference, or reliance on the contents of this whitepaper.

The information in this whitepaper should not be considered business, legal, financial, or tax advice. Consult your legal, financial, tax, or other expert advisors about PUB-30 and its public ICO.

3.0 ABSTRACT

In 2017, the first game that used blockchain technology was released. The Global Non-Fungible Tokens (NFTs) market was valued at USD 15.70 billion in 2021 and is predicted to reach USD 122.43 billion by 2028.

In-game economies have evolved considerably, with some games believed to have billions of dollars in virtual items traded annually. Despite this astounding expansion, there are inefficiencies in the market, and the benefits are not equally shared. Even gamers struggle to monetize their efforts despite spending endless hours playing games they enjoy.

As ardent supporters of blockchain technology, we feel it is time for all parties in the gaming ecosystem, including gamers, developers, and publishers, to profit from this remarkable growth. It entails giving the gamer and the market greater power, allowing gamers to purchase and sell the virtual assets they acquire, and also providing them with additional ways to earn rewards as they play and contribute money to the ecosystem.

PUB-30 filled this gap by creating the game token BEP-20. It's a Binance chain-based token that allows players to monetize and developers to generate new revenue streams by creating new commodities.

The PUB-30 token will be used in this game ecosystem to reward players and to buy, sell, and exchange rare items. The output of a global marketplace for designing and trading digital goods will give players more influence over the expensive items they've bought. Developers and content producers will be able to improve their current rare items by introducing specialized non-fungible items, which will be based on the new BEP-20 token standard, one of the main aspects of the PUB-30 ecosystem.

4.1 PUB-30 Technology

PUB-30 intends to employ the Binance Smart Chain to standardize in-game spending and digital asset trading on our worldwide marketplace. Our mission is to become the global transactional currency to trade items in the gaming environment and to reward gamers for playtime and in-game achievements. PUB-30 genuinely empowers players by uniting the ecosystem.

They make use of BEP-20 technology. It is a Binance Smart Chain token standard that en-

- The BEP-20 token standard serves as a blueprint for other tokens.
- BEP-20 tokens can represent a share, a crypto asset, a fiat currency, or any other asset of your choice.
- The BEP-20 tokens can be linked to tokens from different blockchains.
- Those who act as validators for the transfer of BEP-20 tokens are rewarded in BNB.

4.2 PUB-30 Project

The PUB-30 project was formed by the Secret Gaming Community and its founder in 2022. They have been transacting in a variety of fields, specifically gaming.

4.3 PUB-30 Interaction

It can be bought, sold, and traded among players on multiple exchanges. On the open NFT marketplace, users can purchase and trade PUB-30 bases, virtual land, and game avatar par-

4.4 PUB-30 Rule

To activate any bundle, you must have 80 percent PUB-30 token and 20 percent PUB-20 token.

4.5 PUB-30 Social

Join the NFT Discord and Telegram chats to see what other people are talking about NFTs and upcoming releases.

5.0 PUB-30 REWARDING TOKEN

We've developed PUB-30, a BEP-20-compatible utility token that empowers players, fosters an open gaming environment with unique (non-fungible) products, and pays players for the time and work they put into games. It is based on the Binance blockchain and is operated by publishers, developers, and gamers throughout the ecosystem.

PUB-30Token can be used to pay asset designers' royalties, connect game economies, and reward skillful or valuable conduct.

There are five main ways for gamers to get PUB-30 tokens.

1. Through involvement in our Token Generation Event.

2. Accomplishments and skill-based in-game actions that reward you with them.

3. Buying and selling digital assets to get money.

4. You can purchase them from our global Token Store.

5. Getting paid royalties for creating digital assets with their help.

6.0 PUB-30 BENEFITS

- **Lower transaction fees**

- **Increased transparency and security**

- **Tailor rewards to boost retention and playtime**

- **Combine the game with a larger ecosystem**

The developers have not overlooked any details. The third-party and the publishers are both transparent. Instead of a murky marketplace that operates in the dark, PUB-30 creates a secure and long-term environment that benefits gamers. The fee is minimized, and players' discretion over moves will be guaranteed. All trades in the marketplace will be monitored on the blockchain, allowing publishers to understand their customers' behavior and the economies of their games.

7.0 OUR PRINCIPLES

7.1 Belief in Reality: We proceed with curiosity, knowledge, and compassion.

7.2 Make things simple: Our habits and processes assist us in succeeding.

7.3 Punctual: We work quickly and value action over perfection.

7.4 Exhibit-Modern Vision: We strive to be the best version of ourselves.

8.0 SECURITY OF THE IN-GAME PURCHASE AND BILLING SYSTEM

All interactions with the billing and payment systems will take place on the server and will be protected by multi-level access controls and transaction audits. To safeguard the billing systems, a combination of network filtering, anti-DDoS protection, and a.i.-based advanced threat prevention powered by machine learning will be used.

8.1 PUB-30 API SECURITY

The security of the PUB-30 API has been a critical component since its initial release. Rather than just blacklisting permitted messages, GamerTokenPUB-30 will be protected by extensive network-level access restrictions, audit trails, whitelisting, and blockchain.
